

# Height Safety Awareness

## INTRODUCTION

Just under 40% of people in NZ that suffer with traumatic brain injuries are caused by falls. This is why height safety is so important!

With a lot of our customers working in industries that have potential fall risks, we believe it is essential that we do our part by making it easy to choose potentially life saving PPE.

Check out the resources below on how to choose the correct helmet, harness, and some options of different kits for your industry.

## Section 1

### Still using a hard hat while working at height?

A hard hat is tested for objects falling from height and hitting the top, but the sides are usually not tested for any impact what so ever.

With the potential risk of finding yourself in a situation that meant you were to hit your head from a fall, there is a very slim chance that a standard hard hat will protect your head and your brain from serious injury. This is where a helmet becomes an essential item of PPE!

It is common to want the best work boots on the market, the ones that fit our feet comfortably, feel solid and fit for purpose, and look good as well. Most people would spend top dollar to make sure their feet were looked after, so it should be a no-brainer that we'd hold the same priority for our heads!

*Check out this tool on how to choose the correct helmet for your industry [here](#).*

## Section 2

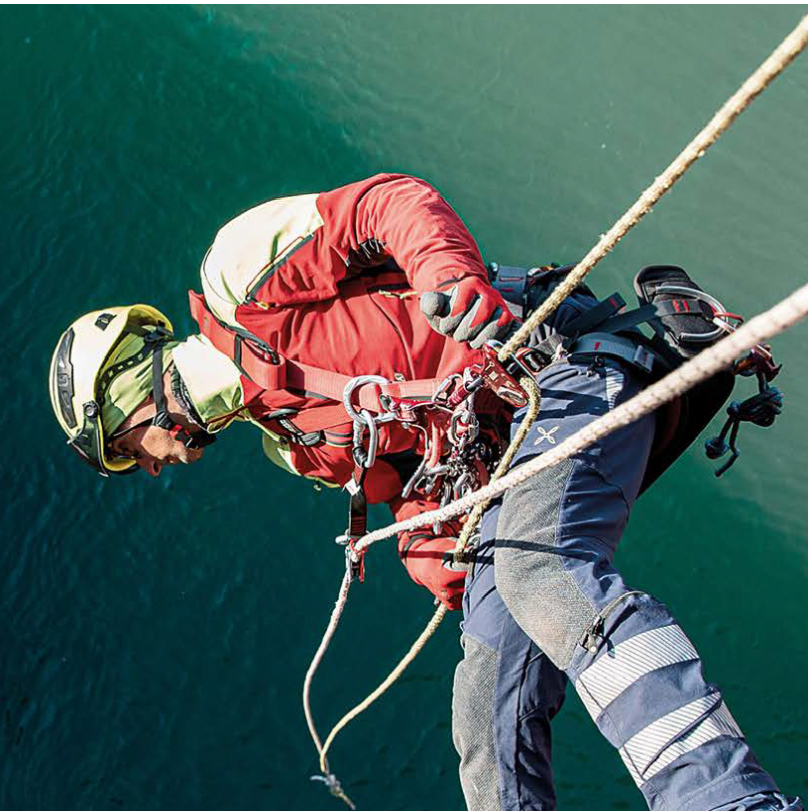

### Do you have a trauma strap on your harness?

If an accident occurs while you are working at height and you find yourself in the hanging position waiting to be rescued, you may want to consider having trauma straps.

Can you imagine your entire body weight being supported by the straps around your legs? The circulation and blood flow to your legs could be compromised if you don't have a quick rescue plan in place.

Trauma straps allow a suspended person to step out of this compromising position, and improves comfort and balance while waiting to be rescued.

*Check out the trauma straps [here](#), and a guide on what harness is suitable for your industry [here](#).*

## Section 3

### Want a pre-designed kit that suits your specific Industry?

Lucky for you, we want to make things simple for our customers!

A pre-designed kit encompasses all of the necessary height safety equipment for specific industries.

Whether you are in construction, utilities, roofing, or scaffolding, you can find a kit that fits your job!

*Check out this tool on how to find the right kit for you [here](#).*
